1. Sign up a github account and login on github website.
2. Click the link of 100DaysCodeChallenege:
   https://github.com/chetanhere/100-days-of-code/
3. Fork the repository to your github account. Now you have the copy of whole repository local to your account.

4. Now you have a repository at https://github.com/<your-username>/100-days-of-code/
5. Click on commitment.md file and click edit option there.

6. Update the social profile links from your social media profiles. And Save it.

Put comments and commit changes, and you are done.

7. Same thing needs to be done with your whole repository. And logs file need to be updated daily (hardly a task of less than 2 minutes.)

8. I shall share another tutorial to update code to github and local setup of github on your machines.

<Link to my public post over LinkedIn> I am posting over LinkedIn, because I have largest following there. I have more than 13000 connections, so increased accountability.
